

ACPO CHEMIST'S RING REQUEST FORM

This six-sided ring is now a national symbol of the professional chemist in Canada and is recognized by members of the Federation of Canada's Professional Chemists (FCPC).

To those knowledgeable in chemistry, the ring design is instantly recognizable. It is a hexagon with a circle in the middle – the classic representation of the benzene ring. ACPO members will also recognize this as the basis for the design of their professional stamp.

It will continue to demonstrate that you are a member of the chemical profession.

RING FINGER

Although this will be your personal choice, the accepted method of wearing a professional ring is on the last finger of your dominant hand. The dominant hand is considered to be the working hand, from which a person's strength flows. For the majority, this will be the right hand.

For many of us, this ring will be a continuing reminder of the trust that society has placed in us and of the ethical rules of our profession. In addition, it will provide a tangible symbol for the public and other professionals that the wearer is a professional chemist.

COMFORT

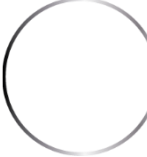

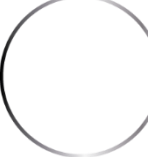

To maximize the ring strength and to ensure comfort for the wearer, the ring will not have completely straight edges or sharp corners on the outside circumference.

The ring was tested and was found to be comfortable and durable while doing office work as well as while performing fairly heavy physical labour. The rounded edges do not interfere with the use of laboratory gloves worn while performing low-risk analysis. You should, of course, remove all jewelry to maximize personal safety if you work in potentially hazardous situations. The ring may turn slightly at various times but still remains comfortable.

ELIGIBILITY

The Chemist's Ring is available for sale to any ACPO Professional Chemist who is a member in good standing.

SIZE CHART

Ring						
Size	3	4	5	6	7	8
Diameter	14.1 mm	14.9 mm	15.7 mm	16.5 mm	17.3 mm	18.1 mm
